- Will ship nationwide.
- Large rolls available on request for do it yourselves.
- Translucent copper color.

"Delivering the cleaning supplies that protect your workplace"

NanoSeptic Self-Cleaning Surfaces

NanoSeptic Surfaces oxidize any organic contaminant without the use of hazardous chemicals or toxins. Essentially what happens is any normal indoor light (fluorescent, incandescent, or LED) or outdoor light (UV) energizes nanocrystals on the surface which results in an oxidation reaction. This oxidation effect breaks down all organic contaminants.

The self-cleaning action starts working immediately and works 24/7 for up to three months on items like door handles and touchscreens. It's not a one-time action, it's a continuous action. These "TouchPoints" should be replaced once a quarter (every 60-90 days).
